

Remarks:

1. This amendment has been made to cancel Claim 6 to overcome the rejection in view of the prior arts as cited.
2. Claims 1~5 have been amended to overcome the rejection/objection under 35 USC 112. The Examiner's scrupulous examination is highly appreciated by the applicant. For example, the "eccentric hole" has been amended to be "circular hole" to be definite.
3. For Drawing objections:
 - (A) For the "multiple-pole magnet" as presented in the Claims has now been amended to be "magnet" to overcome the rejection/objection on the Drawings. Since the magnet (3) and the electromagnetic coil (4) are conventional or wellknown elements, their detailed structures are thus not shown in the drawings. Still, the hatch lines showing the magnet (3) and coil (4) are now canceled, and are partially substituted with few shading lines therefor. A set of Replacement Pages of corrected drawings is enclosed herewith for the Examiner's further approval.
 - (B) Claim 5 is currently amended to cancel "rectifying circuit" and "lens" to overcome the drawing rejection.
4. For Claim 2, "the shaft of the driving motor" has its antecedent basis already presented in the amended Claim 1, Line 4, namely "a sleeve adapted to be secured on a shaft of a driving motor....". So, the claim objection for Claim 2, Item (b) (P. 4, the bottom two lines ~P. 5, Line 2 in the Office Action) is thought to be

overcome.

5. Since Claims 1~5 contain "Allowable Subject Matter", this amendment has been made to place this application in condition of allowance. An early Notice to this effect is respectfully expected.

Respectfully submitted:
